

Cedar Valley shingle siding panels are the perfect choice for your residential or commercial shingle project. Cedar Valley manufactures their panels by hand applying high quality Western Red Cedar shingles to 8' plywood panels. This creates a siding product that is beautiful, durable and easy to install. Shingle panels simplify the installation process and reduce labor costs significantly when compared to individually applied shingles. Cedar Valley panels are available in a variety of sizes and styles to compliment the design you choose.

- Cedar Valley shingle panels can be installed 6 times faster than hand applied shingles lowering installation costs.
- The 8' panels are available in 4-1/4", 5-1/3" and 7-1/8" exposures. Custom exposures are available by special order.
- Panels are available in even butt, staggered butt or open keyway patterns.
- Cedar Valley shingle panels are an integrated system. Corners, column wraps, radius panels and flares are available.
- Decorator shingles are available as panels or single shingles to dress up your shingle design--great for gable ends and interior feature walls.
- Cedar Valley uses only premium grade western red cedar shingles in their panels. The shingles are kiln-dried and applied to an 11/32" exterior plywood backer for superior stability.
